FEATURES

▶ Manage all your valuable keys and assets from a single user interface

▶ Assign access to individual keys and fobs

▶ Raise an alarm in PACOM Unison when a key is pending and has been returned late

▶ All events and alarms appear in the PACOM Unison event log

▶ Generate reports that outline all key activity

▶ Ability to set temporary access restrictions while using a key

▶ Support for automatic upload of configuration data

PACOM Unison Keys and Assets Integration provides a secure means of restricting access to a building and protecting assets for different types of businesses.

The Unison Keys & Assets Module offers support for an unlimited number of users, readers and different types of card technology making it an ideal investment for growing organizations. It ensures flexibility as you can customize access permissions by restricting people, cordoning off an area or blocking an entry or exit for a certain period of time.

Monitoring who, when and where keys and assets are accessed adds confidence and peace of mind with control and immediate response to raised alerts when alarm conditions exist.

PACOM Unison provides flexible key and asset management with complete control and monitoring of assets with its intelligent interface to third party key management systems.

SUPPORTED INTEGRATIONS

PACOM Unison supports integration with the following third party systems:

- Traka32
- Deister ProxSafe

Refer to the PACOM feature sheet on the respective manufacturer for further details about the integration.
